
Training and Awareness

One of the weakest links in your security chain is your organization's employees. While it is usually non-malicious, the uninformed employee can do harm to your network by visiting websites infected with malware, responding to phishing e-mails, storing their login information in an unsecured location, or even giving out sensitive information over the phone when exposed to social engineering. One of the best ways to make sure company employees will not make costly errors regarding information security is to institute company-wide security-awareness training initiatives that include, but are not limited to classroom style training sessions, security awareness website(s), helpful hints via e-mail, or even posters. These methods can help ensure employees have a solid understanding of company security policy, procedure and best practices.

Some of the more important items to cover in your security awareness training may include:

- Organization's security policy
- Data classification and handling workspace
- Physical Security
- Desktop Security
- Wireless Networks and Security
- Password Security
- Phishing
- Hoaxes
- File Sharing and Copyright
- Malware
 - Viruses
 - Worms
 - Trojans
 - Spyware and Adware

Acextic is in a crucial position to strengthen this weak link in your security protection through training. We have certified experts who can help your employees get informed and certified
